iXware International

iXware Scanning

iXware Scanning gives you the complete freedom to support your business processes; to make (paper) documents part of your digital workflow. iXware Scanning turns your Xerox MFP into the on-ramp for that digital workflow and makes it even more multifunctional with the full power and functionality of the iXware solution at your disposal.

iXware has added scanning functionality to its Xerox EIP interface by popular demand. Use your Xerox MFP to scan documents to your network or business application.

Easy to store

Simply walk up to the Xerox MFP with EIP enabled, select the appropriate scan template from the iXware client, select/answer the question(s) as defined by your organization and iXware will OCR the document and archive the document digitally as a text searchable PDF message or send it to the business application for storage and processing.

Easy to retrieve

Because iXware stores the documents as text searchable PDF files, you can use the acrobat reader or any desktop search engine to find the right document. You can search by metadata, such as the answers to the questions entered at the time of scanning, or you can search by content. A supplier name, a customer reference, an address field, an amount... anything will let you find the right document instantly.

Easy to integrate

Use iXware's open standards philosophy to integrate with any business application (ERP/CRM/DM). iXware Scanning gets your documents to where you need them, how you need them.

Easy to use

The user has a single EIP interface on the Xerox MFP for scanning, faxing and emailing from the Xerox MFP. Email comes free with either Scanning and/or Fax. It's intuitive. It's easy!

Easy to configure

The iXware scanning templates provide complete freedom to support your business process. Templates are easy to create and modify. Simply create the relevant questions for the user to answer. Answers can be manually input (alpha/numeric) or selected from database tables on the Xerox MFP.

A document scanning and faxing solution

Learn more at www.ixware.com

1

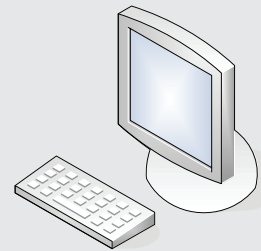

Simply walk up to the Xerox MFP with EIP enabled and scan your document using intuitive templates.

2

The iXware server will convert the document to a text searchable PDF or Multi-page Tiff and store it on your company's network or in business applications.

3

You can easily retrieve any scanned document from your desktop computer

Easy to expand

iXware Scanning can easily be expanded with other iXware modules with one plus one equalling more than two. A few examples:

- **Fax and email** - Fax and/or Scanning functionality in a single solution and EIP user interface. iXware's modular structure lets you combine now or add later. iXware Scanning's OCR functionality adds additional value to the iXware Fax module by letting you store fax messages as text searchable PDF files.
- **XML** - iXware's XML module lets you store scanned documents in business applications such as Document Management, CRM or ERP, but it also lets you generate fax messages from these applications. Use iXware to convert existing digital files on your network or in business applications to text searchable PDF documents.
- **Redundancy / Load Balancing** - Deploy iXware's redundancy and load balancing options for mission critical environments.

Specifications

Hardware requirements (server):

- Ask for hardware requirements

Xerox products supported:

- All Xerox MFPs with EIP enabled

Applications supported:

- Use iXware's open standards philosophy to integrate with any business application (ERP/CRM/DM).
